

IMAGE-J and FIJI

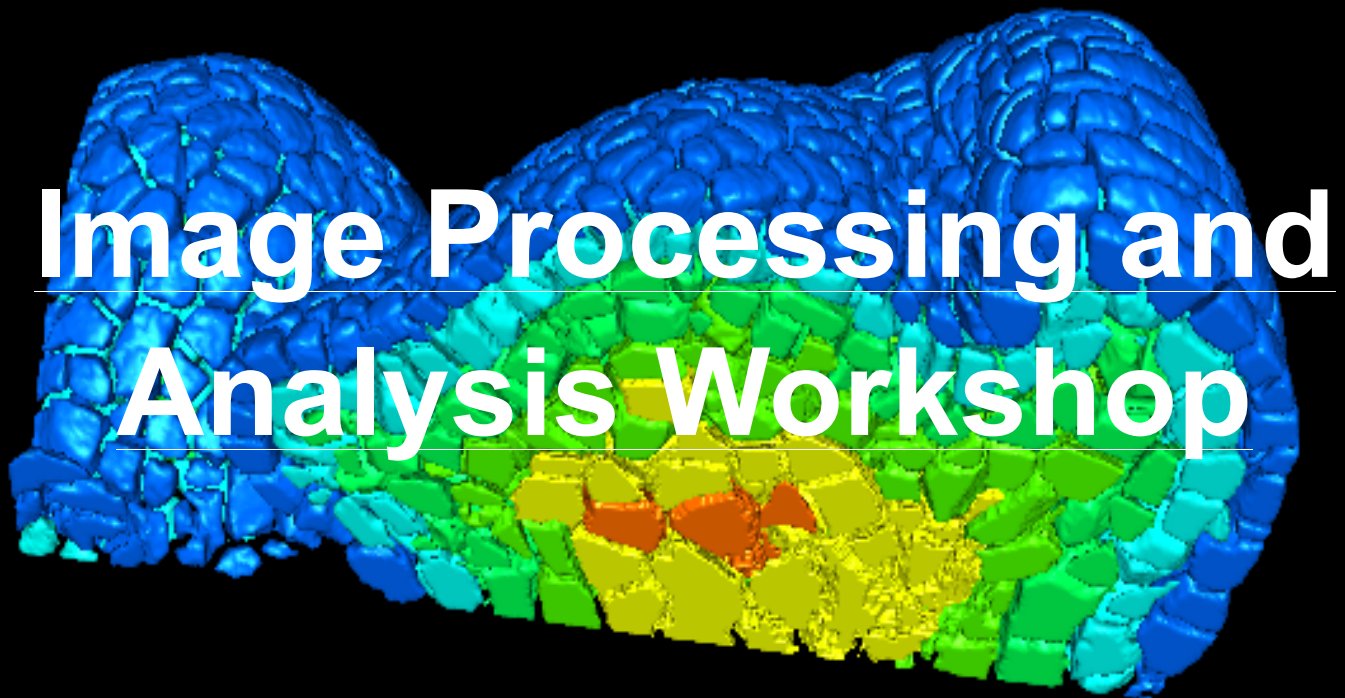

Image Processing and Analysis Workshop

by **Teng-Leong Chew, PhD**

Director, Cell Imaging Facility • Nikon Imaging Center

**3-day intensive course covering topics from
basic image analyses to programming of macros**

This workshop is opened to all Northwestern-affiliated researchers who are interested in learning:

basic concepts in digital imaging • fundamentals in digital image processing • 3D rendering • protein dynamics and movement • co-localization analyses • morphometry and object segmentation • particle tracking • analysis of cell migratory behavior • macro programming in ImageJ • how to combine available macros to create your own ImageJ plugins

January 16-18, 2013

Registration required e-mail: t-chew@northwestern.edu
